

Company: Solid Gear SL

Location: **Valladolid, Spain**

Job category: **Engineering**

## **New College Graduate – Software Engineer**

### **The company:**

Are you a Computer Science or Telecommunications Engineer? Are you interested in mobile technology? Would you like to work in an agile environment? Are you proactive? Have you got a strong English level? Would you like to work in a growing startup in Spain in an international team?

If the answers are YES, then Solid Gear is your chance and we want to know you better!!

*Why should you do an internship at Solid Gear?*

Solid Gear is a growing startup that is specialised in mobile technologies. It is a place where engineers have a great work balance, amazing atmosphere, flexible hours and opportunities to work with multiple groups and projects.

Our culture means that everyone's input is encouraged and valued, so of course, our interns are part of the team, and thanks to this, our services and products are very reliable and competitive.

### **Role Overview:**

- Close work within the Development team group.
- Collaboration in the development process of different applications based on human resources.
- Follow Scrum guidelines to know how an agile methodology works.

Company: Solid Gear SL

Location: **Valladolid, Spain**
