

## Press release

### **Workshop in Surducu Mare on green remediation of polluted soils**

Politehnica University Timisoara (Romania) and the Mining and Metallurgy Institute Bor (Serbia) jointly launched a project in 2019 to create an educational and research network dealing, in an integrative manner, with the issue of soils polluted due to mining activities. The network brings together scientists from different domains, but also decision makers and inhabitants of the affected areas, interested in initiatives to protect the environment and ensure the sustainable use of natural resources in the Romanian-Serbian cross-border area.

Tuesday, July 28th, 2020 the village Surducu Mare (belonging to the municipality Forotic, Caras-Severin county) will host a new workshop on the technical, medical, and green technology aspects of decontaminating polluted soils. The participants will be invited to join the network, to receive interesting and timely information on environment projects.

**The activity of project** "Forming of network for enhancing environmental protection from pollutants of mining cross border areas", acronym NETMIN, eMS no. RORS-308, is financed within the framework of the **Interreg-IPA Cross-border Cooperation Romania-Serbia Programme**, which ensures 85% of the funds.
