

ERASMUS+ Timisoara – Report

During my four and a half month visit of Timisoara I have numerous positive impressions.

First of all my motivations to apply for Erasmus was basically connected with intension to improve myself in the field of my research via cooperation with professors from UPT. Basically I didn't know what kind of program is Erasmus+ and what does it involve. Furthermore I thought that participating in Erasmus meant regular studies in foreign countries. Fortunately I was completely wrong in my judgement. After coming in Timisoara I had soon been involved in many kind of socializing programs that connect students from different parts of not only Europe but also world. For a four and a half month I make many friendships with different people. Besides, I got more experience in sense of sharing knowledge with others. In my opinion the most interesting event at Erasmus+ were sport event, where my roommate, two guys from Macedonia and I won basketball Erasmus+ tournament in Timisoara. In spite of that, it is very important to underline very good organization. Friendly students from Romania, who were organizing all events, were extremely helpful and didn't hesitate to give a hand to me whenever I need something. The most important conclusion concerning Erasmus is to figure out that there are many benefits connected with making new friends, expanding cross cultural and communications skills and getting know with people from different parts of the world.

Secondly I should not forget to mention my pleasure for being in Timisoara. Timisoara is really beautiful city with a lot of sightseeing, maybe it is smaller comparing to Belgrade but there were a lot of weekly events that were heled in Timisoara, so me and my friends from Serbia had been participating in many of them. Romanian people are very friendly and eager to cooperate, especially the ones that were in dorm with us. We have visited almost every pub and restaurant in Timisoara and tried different dishes from Romanian cuisine. I wont forget to say that unfiltered Timisoreana beer is the best one.

Finally beside of having fun I also studied hard. Professor Lelela and I wrote 2 articles connected with microchannel heat sink. One of it will be presented in conference that is

going to be held in Bucharest at the beginning of July and other article we are going to try to publish in journal International communications of Heat and Mass transfer. Besides of that I did one short article for conference in Belgrade that was held at the beginning of July. Moreover I read a lot of books from different subjects concerning turbulence modelling, CFD (computational fluid dynamics) optimization, time series analysis, statistic and probability. I would also express my thanks to prof. Lelea for his tutorship, willingness and patience to work with me and explain me all misunderstanding that I had.

Developing relationships with not only Erasmus students but also Romania, generally speaking, made me able to interact with different cultures to improve my interpersonal skill but also it gave me a chance to start working on betterment of adapting Erasmus culture in my home University of Belgrade so future students is going be able to experience same as I did.

Yours sincerely,

Andrija Petrovic
